## **IMS 2022, Booth 4077**

Linear Photonics will be previewing their new family of directly modulated transmitters that support a wide range of bandwidths (6, 10 or 18 GHz) and wavelengths (1310 nm, 1550 nm). Linearizer Technology will be featuring their V-band Linearizer with integrated front end SSA and offering many other options.

Linear Space will be debuting a new highly versatile linearizer for use on next-generation satellites will be displayed at IMS2022. This linearizer enables power amplifiers to operate over a very wide range of frequencies (> 3 GHz bandwidth) and power levels, maintain optimum linearity and efficiency.
